

14. The thyristor arrangement as claimed in claim 9, wherein the triggering device is an optical triggering device which is integrated on a body made of semiconductor material of the auxiliary thyristor.

15. The thyristor arrangement as claimed in claim 10, wherein the triggering device is an optical triggering device which is integrated on a body made of semiconductor material of the auxiliary thyristor. --

**REMARKS**

Claims 1-15 are now present in this application, with new claims 12-15 being added by the present Preliminary Amendment. It should be noted that the amendments to original claims 1-11 of the present application are non-narrowing amendments, made solely to place the claims in proper form for U.S. practice and not to overcome any prior art or for any other statutory considerations. For example, amendments have been made to broaden the claims; remove reference numerals in the claims; remove the European phrase "characterized in that"; remove multiple dependencies in the claims; and to place claims in a more recognizable U.S. form, including the use of the transitional phrase "comprising" as well as the phrase "wherein". Other such non-narrowing amendments include placing apparatus-type claims (setting elements forth in separate paragraphs) in a more recognizable U.S. form. Again, all amendments are non-narrowing and have been made solely to place the claims in proper form for U.S. practice and not to overcome any prior art or for any other statutory considerations.

**SUBSTITUTE SPECIFICATION**

In accordance with 37 C.F.R. §1.125, a substitute specification has been included in lieu of substitute paragraphs in connection with the present Preliminary Amendment. The substitute specification is submitted in clean form, attached hereto, and is accompanied by a marked-up version showing the changes made to the original specification. The changes have been made in an effort to place the specification in better form for U.S. practice. No new matter has been added by these changes to the specification. Further, the substitute specification includes paragraph numbers to facilitate amendment practice as requested by the U.S. Patent and Trademark Office.

**CONCLUSION**

Accordingly, in view of the above amendments and remarks, an early indication of the allowability of each of claims 1-15 in connection with the present application is earnestly solicited.

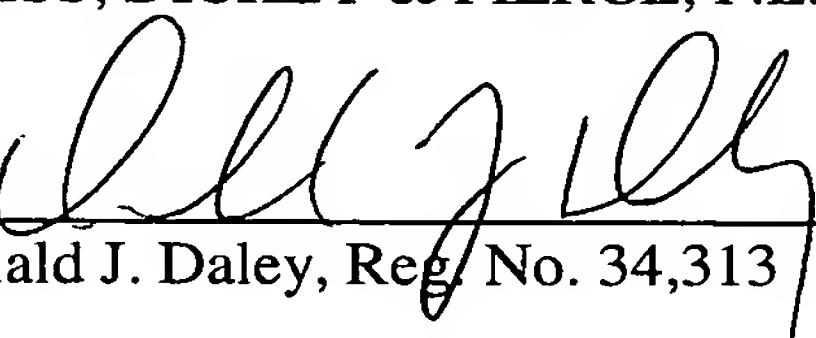

Should there be any outstanding matters that need to be resolved in the present application, the Examiner is respectfully requested to contact Donald J. Daley at the telephone number of the undersigned below.

New PCT National Phase Application  
Docket No.: 32860-000314/US

If necessary, the Commissioner is hereby authorized in this, concurrent, and future replies, to charge payment or credit any overpayment to Deposit Account No. 08-0750 for any additional fees required under 37 C.F.R. § 1.16 or under 37 C.F.R. § 1.17; particularly, extension of time fees.

Respectfully submitted,

HARNESS, DICKEY & PIERCE, P.L.C

ABSTRACT OF THE DISCLOSURE

A thyristor arrangement includes a main thyristor, at least one auxiliary thyristor, a resistance device which electrically connects the auxiliary thyristor and the main thyristor to one another, and an optical triggering device for breakdown triggering of the main thyristor via the auxiliary thyristor and the resistance device. The resistance device defines a time-dependent ohmic resistance in such a way that the value thereof is relatively large during a switch-on phase of the main thyristor and relatively small during a current-carrying phase of the main thyristor.
